

{Document Type} ABSTRACT

Contamination into other culture containers by airborne matter which had been spattered when a predetermined treatment is performed on a specimen in a culture container is

5 prevented. There is provided a culture treatment apparatus comprising: a treatment chamber in which is stored a treatment device (19) which opens a lid (3b) of a culture container (3) storing a specimen to perform a predetermined treatment on the specimen inside of the culture container (3);

10 and a sheet member (45) arranged below the culture container (3), which cover the top surface of the treatment device (19).
